

Azure Region Selection and Shared Responsibility Model

Selected Azure Region

Region Chosen: **West Europe (Netherlands)**

The West Europe Azure region was selected because it provides strong connectivity, low latency, broad Azure service availability, and reliable performance for users in Nigeria and West Africa.

Shared Responsibility Model

The Shared Responsibility Model explains how responsibilities are shared between Microsoft Azure and the customer.

Microsoft Azure Responsibilities	Customer Responsibilities
1. Physical security of data centers 2. Hardware and infrastructure maintenance 3. Network infrastructure 4. Host operating systems 5. Availability of Azure cloud services	1. Managing user accounts and access permissions 2. Protecting application data 3. Configuring network security settings 4. Updating and securing applications deployed in Azure 5. Monitoring cloud resources and usage

Example for a Resource Group:

For a deployed Azure Resource Group:

- Azure manages the underlying cloud infrastructure.
- The customer manages the resources inside the Resource Group, including access control, configurations, and security policies.
